

Heat Pumps: A Hot (and Cool) Technology

Up to \$800 off the purchase of a heat pump, until December 31, 2017

What is a heat pump?

It's an advanced-technology air conditioner with a reversing switch that allows you to change its function from cooling to heating in the winter— all with the press of a remote control button.

Why would I want one?

- **Heat and cool with one system**—energy efficient, no ducting required.
- **Pro installation, done once**—no seasonal removal or reinstallation; windows can remain closed and secured in summer.
- **Shhh... they run quiet!** That's a big plus compared to many air conditioners.

Up to \$800 off the purchase of a heat pump, until December 31, 2017

So, is a heat pump right for you?

We can help you determine if a heat pump makes sense for your home or business, walk you through rebates and financing, and connect you with a qualified contractor.
